## **DETAILED ACTION**

*This is responsive to Applicant's amendment filed on 3/12/07.*

### ***Response to Arguments***

Applicant's arguments filed 3/12/07 have been fully considered but they are not persuasive. Applicant argues that Perez et al do not show a compressed gas as an annealing medium in the chamber and annealing the amorphous polymeric optical element. Examiner does not agree with Applicant's argument because Applicant fails to claim the "compressed gas as an annealing medium in the chamber" in claim 11.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

**Claims 11 and 12 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Perez et al [USPAT 6,468,451].**

Perez et al disclose a method comprising:

a) mounting an amorphous polymeric optical element [column 1, lines 19-26] into a chamber [column 6, lines 14-26];

b) introducing a compressed gas in a supercritical phase or a liquid or vapor phase approaching the supercritical phase [column 6, lines 23-26] into the chamber and annealing [column 10, lines 44-48] polymeric optical element.

Note that recovering process step is inherently done once all the process is done.

In re claim 12, Perez et al show at column 4, lines 25-43 that the temperature is about 30°C, and the pressure is about 143 atm.

***Allowable Subject Matter***

Claims 1-10, and 13 are allowed.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
